

SAC3000

SAC3000 ALL-TERRAIN CRANE
300 TONS LIFTING CAPACITY

Quality Changes the World

SANY

SANY Automobile Hoisting Machinery is one of the core business unit of Sany Heavy Industry, mainly engaged in the research and development of high end, mid to large tonnage crane series, including mobile crane, crawler crane, tower crane and loader crane. It has two industrial parks in Ningxiang and Huzhou, since entering the market, the products of Sany Automobile Hoisting Machinery have received worldwide recognition with advanced technology, lean manufacturing, high reliability and excellent service.

Excellent and stable chassis performance

The use of innovative 6-axle chassis design with six driving modes and four braking modes, providing more reliable traveling performance. High stability and safety are guaranteed with tipping over early-warning technology.

Ultra long Boom for Wide Working Radius

Longest boom length is 80m and fixed jib is 42m, which ensures Max. lifting height of 112m and Max. working radius of 80m. 0°~ 40° automatic infinite variable luffing jib is applied to ensure conveniently switching over between all operation with high efficiency.

Highly efficient, energy-saving and unique hydraulic control technology

Self-developed dual-pump converging / diversion main valve is used. Converging flow of the single-action dual-pump ensures fast operation and high work efficiency, combined-action dual-pump diversion system is applied to ensure stable controllability. Electric proportional variable displacement piston pump is used to ensure high-accurate flow control with higher efficiency and energy saving.

Safe, stable, advanced and intelligent electronic control technology

The adoption of internationally advanced distributed integration bus data communication network and the configuration of abundant sensing elements can achieve timely feedback of data information and monitor the overall working status in real-time. The human-computer interaction interface is used to meet with customer's individual requirements.

Superstructure

Cab

- It is made of safety glass and anti-corrosion steel plate with ergonomic design such as full-coverage soft interior, panoramic sunroof and adjustable seats etc. humanized design, providing more comfortable and relaxing operation experience. The display of load moment limiter integrates main console and operation display system, which clearly show the data of all operating superstructure conditions for lifting operation.

Engine

- Type: Inline six-cylinder, water cooled, supercharged and inter-cooling diesel engine
- Rated power: 205kw/2200r/min
- Environment-protection: Emission complies with EurollIstandard
- Capacity of fuel tank: 400L

Hydraulic system

- The adoption of key hydraulic parts such as high-quality main oil pump, slewing pump, main valve, winch motor and balance valve etc. ensure high stability and reliability of the system. The electric proportional variable displacement piston pump is used to adjust the pump displacement in real-time through the change of the opening of the electric controlled handle, achieving high-precision flow control with no-loss of energy during operation. Self-developed dual-pump converging / diversion main valve is used with single-action dual-pump applied to ensure high converging efficiency and with combined-action dual-pump diversion ensures good controllability.
- The use of dead-weight luffing compensation hydraulic system ensures excellent lowering micro-mobility and stability.
- Single-cylinder pin telescopic system is used for boom.
- Jib is equipped with luffing cylinder to achieve 0~40°infinitely luffing.
- Capacity of hydraulic oil tank: 1425L.

Control system

- With 24V DC power supply. The PLC integrated programmable controller and CAN-bus control network are used to achieve logic control and electric proportional control of the system by combination with the common electricity.
- With real-time monitoring and fault self-diagnosis system.
- Lifting, slewing and luffing can be controlled by two auto-reset multidirectional electric proportional handles. Foot-type telescopic pedal is used for telescopic operation. Lifting of counterweight, shifting of cab and locking of rotating bed can be controlled through the keys on the control panel.
- Display can be connected with the controller via CAN-bus with main functions as follows: digital adjustment and display of the electric proportional control parameters, display of fault code of the electric proportional system and real-time data display by the hydraulic system.

Luffing system

- The top single-cylinder luffing is applied with luffing angle ranging from-0.4°to 82°. Hydraulic system adopts the dual-pump converging open hydraulic circuit and combine electric proportional control and power lowering with self-weight luffing, achieving large-angle fast lowering and small-angle stable and slow lowering operations.

Main boom

- It consists of seven section booms, welded with bended fine-grain high-strong steel plate with oval section applied to ensure good buckling resistance performance. With single-cylinder automatic pin system, one dual-action cylinder can control telescopic operation of all booms and achieve a variety of boom combinations.
- Basic boom length is 15.4m and fully extended boom is 80m. Max. lifting height is 80m.

Superstructure

Jib

- Fixed jib include adaptor, jib head and 6m and 12m large (small) sectional standard sections. 6m~42m boom combination can be achieved for fixed jib. The use of 0~40° infinite luffing jib improves automation level and working efficiency through changing the angle according to the actual demands of the operating condition. The Max. lifting height of fixed jib is 112m.

Superlift devices

- They are arranged at left and right sides of basic boom head independently and can be self-assembled and self-disassembled without auxiliary lifting. With superlift devices, the stress applied on the lifting boom can be reduced to avoid side bending and to reduce down-warping deformation. Therefore, under long boom state, deflection can be reduced by 20%-30% and the lifting capacity can be improved by above 200%.

Slewing system

- It consists of constant displacement motor and slewing reducer with mature technology. 360° rotation can be achieved through external gearing with slewing ring. With slewing speed of 0-1.2rpm and with infinitely variable speed adjustment. Slewing hydraulic system adopts the closed system, which not only avoids throttling loss of the open system but also ensures a high efficiency. Emergency brake can be achieved through electric proportional brake pedal.

Main hoisting system

- Planet-gear speed reducer and special groove winch drum are driven by hydraulic motor with brake installed internally.
- Wire rope lock: High-quality wire rope lock with casting at ends is applied. It is installed in the lock sleeve directly, which improves the replacement speed of the lifting rate.
- Spec. of wire rope: φ 24-2160, non-rotating.
- Length: About 400m
- Max. single rope speed (outer layer): About 130m/min.

Safety system

- Load moment limiter: With analytical mechanics method, the load moment limiter calculation system is established based on the load mechanical model. The rated hoisting accurate can be up to ±3% through on-line non-load calibration.
- Hydraulic system is configured with the balance valve, overflow valve and two-way hydraulic lock etc., ensuring stable and reliable operation of the hydraulic system.
- Main and auxiliary winches are configured with 3-wraps protectors to prevent over roll-out of the wire rope.
- Boom and jib are configured with height limiters at ends to prevent over-hoist of the wire rope.
- Boom head is equipped with anemometer to detect whether the high-altitude wind speed is within the allowable range.
- With superlift rope rewinding and release pull protection program, jib installation protection and lifting load protection program.

Counterweight

- Combined variable counterweights are used with 0t, 14t, 28.5t, 43t, 56t, 80t and 100t seven combinations to meet requirements of different operating conditions and maximize structural parts performance, which can be self-assembled and disassembled through remote control with good micro-mobility.

Chassis

Cab

- Cab is made of new steel structure self-developed by SANY, featuring excellent shock absorption and tightness. It is configured with swing-out doors at both sides, pneumatically suspended driver's seat and passenger's seat, adjustable steering wheel, large rearview mirror, comfortable driver's chair with a headrest, anti-fog fan, air conditioner, stereo radio and complete control instruments and meters, providing more comfortable and safe operation experience.

Carrier frame

- Designed and manufactured by SANY, anti-torsion box structure is welded with fine-grain high-strength steel plate, providing strong load bearing capacity.

Axles

- Full-axle steering is applied with axles 1, 3, 5 and 6 used for drive operation and with axles 1, 3, 5 and 6 equipped with differential locks for planetary transmission. Axles 1 and 2 adopt the bar-feedback hydraulic power steering systems and axles 3, 4, 5 and 6 adopt the electrohydraulic control steering system with assist in speed control and special steering mode optional applied, ensuring easy steering and flexible operation.

Engine

- Type: Electric controlled, V-type eight-cylinder, water cooled, supercharged and inter-cooling diesel engine
- Rated power: 440kw/1800r/min
- Max torque: 2800Nm/1300rpm
- Environment-protection: Emission complies with EuroIVstandard
- Capacity of fuel tank: 550L

Transmission system

- Gearbox: Manual /Automatic gearbox is adopted with 12-gear and large speed ratio range applied, which meets the requirements of low gradeability speed and high speed traveling.
- Transfer case: Transfer case with a large input torque is used with rated torque up to 30000N.m and with differential lock cylinder configured.
- Transmission shaft: With optimized arrangement of the transmission shaft, the transmission is more stable and reliable. For most optimized transmission, face-tooth coupling transmission shaft is used , with large transmission torque.

Brakes system

- Brakes system includes traveling brake, parking brake, emergency brake and auxiliary brake.
- Traveling brake: All wheels use the air servo brakes and dual-circuit brake system and are equipped with disk brakes.
- Parking brake: Force driven by accumulator is applied on the second to sixth axle.
- Emergency brake: Accumulator is used not only for cutting-off brake but also for emergency brake.
- Auxiliary brake consists of engine brake and exhaust brake etc. There are double brakes for the engine, hydraulic power retarder brake for reducer and eddy current retarder brake for four axle which ensure high safety and reliability of travelling.

Suspension system

- Axle suspension devices adopt the height-adjustable oil-gas suspension devices equipped with the hydraulic lock. With stroke of suspension cylinder of +160/-130mm , achieving suspension, rigid locking, automatic leveling, overall lifting and lowering, single-point lifting and lowering modes. Load applied on each axle is no more than 12t. With good trafficability and adaptability of a variety of severe operating conditions and road conditions, smooth and comfortable travelling and side stability of the vehicle are guaranteed.

Chassis

Steering system

- Servo power steering gear and dual-circuit system hydraulic steering device are used with emergency steering pump equipped. Steering can be adjusted through regulating the speed. Axles 3 and 4 steering will stop from 30km/h and from 60km/h for axles 5 and 6.
- Six types steering modes: 1) Road running mode (default mode). 2) Full-wheel steering mode. 3) Crab-type mode. 4) Steering mode without deflection. 5) Independent rear-axle steering mode. 6) Steering mode with rear axle locked.

Outriggers

- Four-point supporting of the H-shaped outriggers ensures easy operation and strong stability with Max. span up to 8.95mx8.6m. Outrigger telescopic hydraulic system adopts the electric proportional control technology with wireless remote control configured. Outrigger control panel can display all loads and are equipped with automatic level function to ensure high control precision and simple operation.

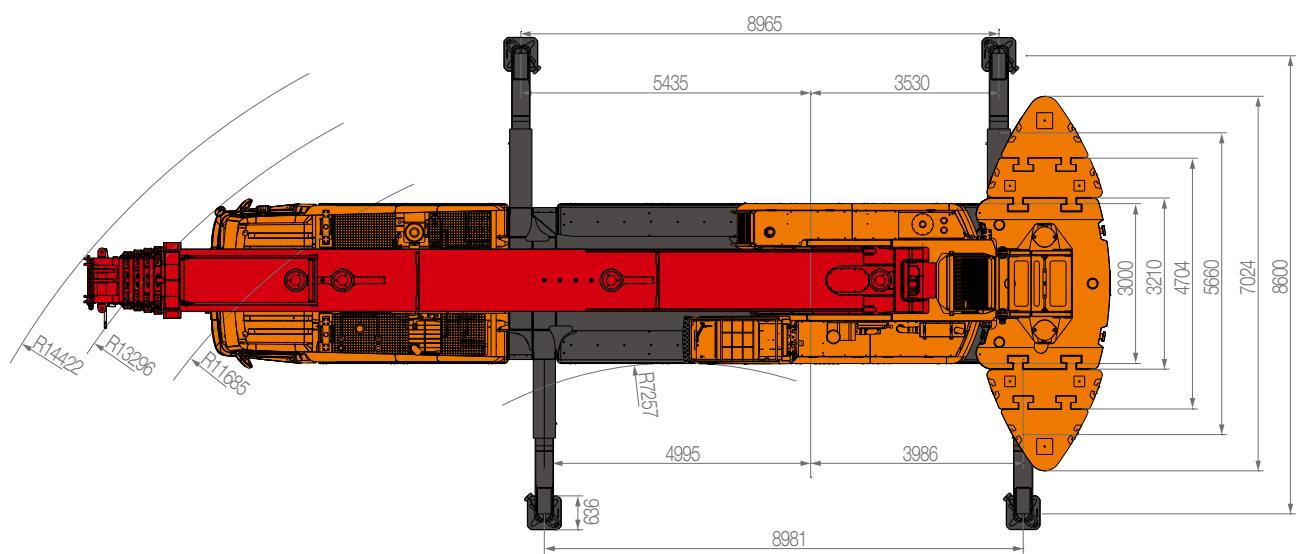

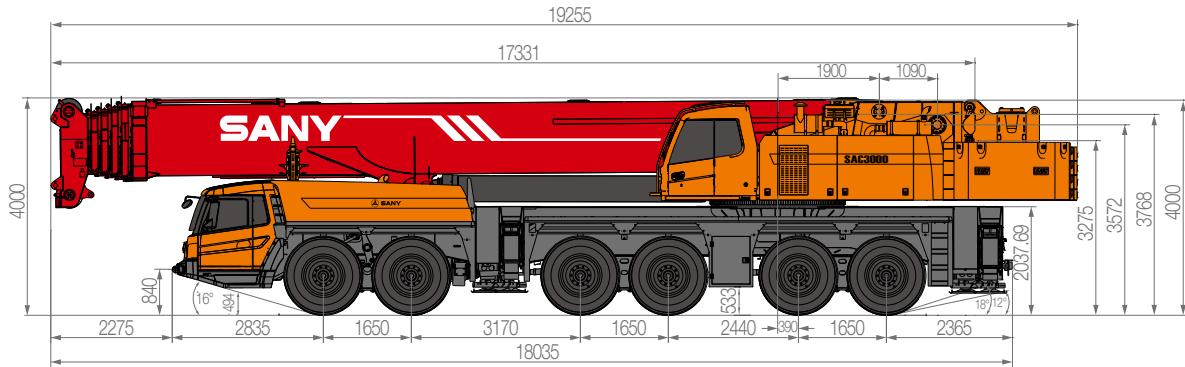

Tyres

- 12*—16.00R25

Electrical system

- With 24V DC power supply, cutting off power of the undercarriage can be achieved. Automotive lighting system is equipped. Vehicle actions, such as throttle and outrigger control can be electrically controlled. Electrical system has strong detection, logic and calculation capacity and with fault self-diagnosis, centralized display and self-protection function.
- Chassis adopts CAN-bus system. Multifunctional centralized display system is used. Power consumption is small with maximum value of only 5w. Four functional keys are provided on the user interface. LCD display is used with adjustable contrast ratio.

*adapter 2.5m+telescopic boom extension 3.5m

Prerequisites:

- ① Boom operating conditions(boom length +adapter+ jib length), max.length is 74.8m+6m+12m
- ② The span of outriggers is 8.95m×8.6m
- ③ 360°rotation is applied
- ④ Counterweight is 100T
- ⑤ Superlift angle is 45°

*adapter 2.5m+telescopic boom extension 3.5m

**SAC3000 ALL-TERRAIN CRANE
LOAD CHART**
Prerequisites:

- ① Boom operating conditions(boom length + adapter+ jib length), max.length is 74.8m+6m+30m
- ② The span of outriggers is 8.95m×8.6m
- ③ 360°rotation is applied
- ④ Counterweight is 100T
- ⑤ Superlift angle is 90°

*adapter 2.5m+telescopic boom extension 3.5m

**SAC3000 ALL-TERRAIN CRANE
LOAD CHART**
Prerequisites:

- ① Boom operating conditions(boom length +adapter+ jib length), max.length is 74.8m+2.5m+6m
- ② The span of outriggers is 8.95m×8.6m
- ③ 360°rotation is applied
- ④ Counterweight is 100T
